

# NGRM500 (HRG), NGRM550 (LRG)

Neutral Grounding Resistor Monitor (NGR)

## NGRM500 (HRG), NGRM550 (LRG)

Neutral Grounding Resistor Monitor (NGR)

**This quick-start guide does not replace the manual!**

### Scope of delivery

- NGRM500/NGRM550
- Safety instructions
- Quick-start

Manual

### Quick-start guide for the following devices

Type	Supply voltage/Frequency range $U_s$	Art. No.	Manual
NGRM500	AC 48...240 V, 40...70 Hz DC 48...240 V	B94013500	D00373
NGRM550		B94013550	

### Intended use

The NGRM500 is only intended for use in high-resistance grounded systems. The NGRM550 is only intended for use in low-resistance grounded systems. In these systems, the NGRM5... monitors

- the current through the neutral grounding resistor (NGR),
- the voltage between the star point of the transformer and ground (voltage drop across the NGR),
- the condition of the NGR.

Any other use than that described in the manual is regarded as improper. Intended use includes all the instructions in the manual.

### Safety instructions

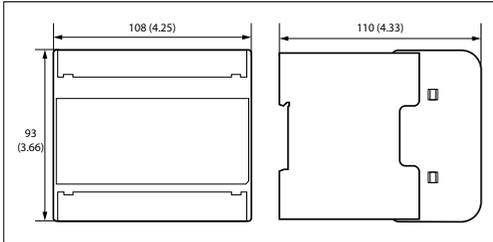

#### **Risk of electrocution due to electric shock!**

*Touching live parts of the system carries the risk of:*

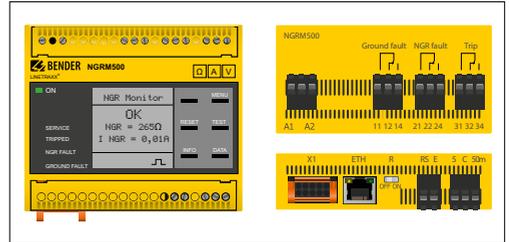

- An electric shock
- Damage to the electrical installation
- Destruction of the device

*Before installing the device and before working on its connections, make sure that the installation has been de-energized. Observe the rules for working on electrical installations.*

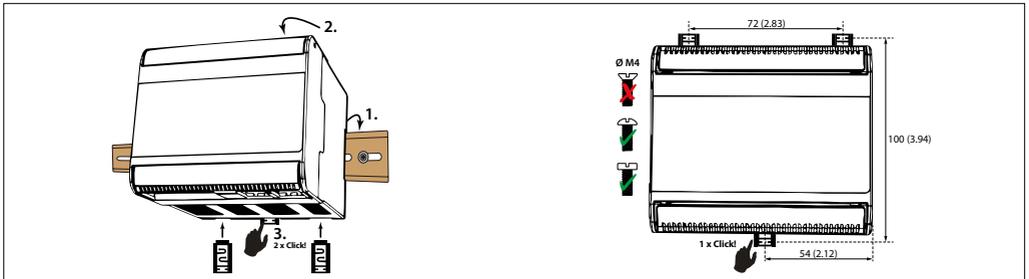

### Dimension diagram (all dimensions in mm (in))

### Enclosure view (front, top, bottom)

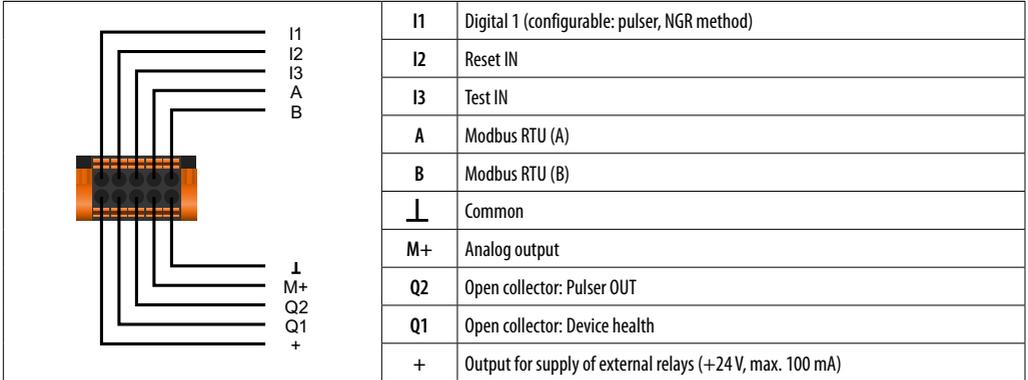

### Mounting

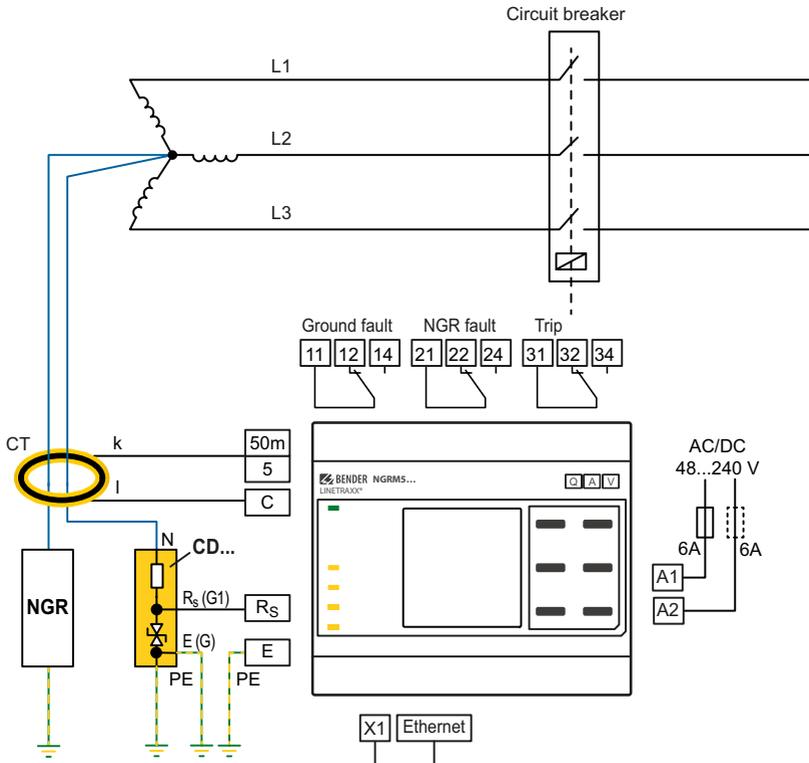

DIN rail

Screw mounting

**Connection X1**

**Star configuration**

**i** The "N" connection of the CD-series coupling device should be as close to the transformer star point as possible.

### Measuring current transformer selection

Depending on the system to be monitored, a suitable measuring current transformer has to be chosen. All common measuring current transformers (50 mA or 5 A on the secondary side) can be used. The following table helps you with the choice:

System type	AC + DC	AC	AC	AC
$I_{NGR}$	1...25 A	5...25 A	5...1000 A	10...2000 A
$f$	0...3800 Hz	42...3800 Hz	50/60 Hz	50/60 Hz
Transformation ratio Bender measuring current transformer	Measuring range (see CTUB103 manual) 5 A 100:1 10 A 200:1 25 A 500:1	600:1		
Connecting cable	max. 30 m	max. 40 m	max. 25 m (4 mm <sup>2</sup> /AWG 12) max. 40 m (6 mm <sup>2</sup> /AWG 10)	
	provided cable or 0.75...1.5 mm <sup>2</sup> /AWG 18...16			
$I_{\Delta n}$				
Type	CTUB103 	CTAC..., WS... 	CTB31...51 	Any standard current transformer can be used.
CT: terminal k	NGRMS...: 50 mA	NGRMS...: 50 mA	NGRMS...: 5 A	NGRMS...: 5 A
CT: terminal l	NGRMS...: C	NGRMS...: C	NGRMS...: C	NGRMS...: C

## HRG system: Recommended minimum value $R_{NGR}$ (tripping level 50 %)

Temperature range  $-40...+60\text{ }^{\circ}\text{C}$ ,  
Field calibration at  $20\text{ }^{\circ}\text{C}$

( ) = Limited temperature range at any field calibration  
temperature  $\pm 20\text{ K}$

The temperatures must be within the limits of the operating temperature range of  $-40...+70\text{ }^{\circ}\text{C}$   
[for UL applications  $-40...+60\text{ }^{\circ}\text{C}$ .]

$U_{sys}$	CD1000/CD1000-2			CD1000-2	CD5000		CD14400					CD25000
	400 V	600 V	690 V	1000 V	2400 V	4200 V	6000 V	6600 V	7200 V	11000 V	14400 V	25000 V

100 A	—	—	—	—	—	(24 $\Omega$ )	—	—	—	—	(83 $\Omega$ )	(144 $\Omega$ )

## Maximum trip times $t_{GFtrip}$ for the CD-NGRM used

The setting for  $t_{GFtrip}$  must under no circumstances be longer than the maximum possible operating time of the CD-NGRM coupling device.

The table shows an overview of the  $t_{GFtrip}$  settings for the coupling device used (menu 6.4):

$U_{sys}$	Coupling device	Ground-fault trip setting	max. $t_{GFtrip}$
400...690 V	CD1000	on or off	48 h
	CD1000-2		
691...1000 V	CD1000	on	300 s
	CD1000-2	on or off	48 h
	CD5000		
1001...4300 V	CD5000	on or off	48 h
4301...14550 V	CD14400	on	60 s
	CD25000	on	90 s
14551...25000 V	CD25000	on	10 s

## Initial commissioning

The commissioning wizard (menu 8) queries the following parameters; additional settings: menu 6.

Language (8.2)	Select
Date (8.3)	Set
Time (8.4)	Set
$U_{sys-L}$ (8.5)	System voltage
Frequency (8.6)	50 or 60 Hz
$I_{NGR nom}$ (8.7)	
$R_{NGR nom}$ (8.8)	
CT primary (8.9)	
CT secondary (8.10)	
CT connection (8.11)	50 mA or 5 A
Field calibration (8.12)	Start or do not start

### 1. Setting the response values (menu 6.4)

- Trip threshold for voltage ( $U_{NGR}$ )
- Trip threshold for current ( $I_{NGR}$ )
- Trip threshold for resistance ( $R_{NGR}$ )

**i** **Low** trip threshold values: may lead to false tripping.  
**High** trip threshold values: the device may not trip at all

## 2. System settings of the relays (menu 6.5)

The factory setting for the relays is fail-safe. In the case of a test, the relays change state.

- i** *Fail-safe: The relay is energized during normal operation and is de-energized in the event of a fault ("fail-safe")*  
*Non-fail-safe: The relay is de-energized in normal operation and is energized in the event of a fault ("non-fail-safe")*

## 3. Field calibration (menu 6.6)

During field calibration, all tolerances of the connected CD-series coupling device and the NGR are considered. The current measured value is calibrated to the set nominal value of the NGR ( $R_{NGR\ nom}$ ). In order to achieve high accuracy, start the device and let it run for at least one hour in the operating environment before carrying out the field calibration.

- i** *For the field calibration the device must be in auto mode (menu 6.3.1 = auto). If the digital input I1 is used with "Digital 1 > NGR method" (menu 6.6.5.3), "Method > external" (menu 6.3.1) must be selected and I1 must be active. The trip relay is switched during field calibration!*

## 4. RMS trip signal, fundamental frequency, harmonics

The measured value which causes tripping can be selected via the "Trip signal" parameter (menu 6.4.11). Trip signal can be:

- **RMS:** The RMS value of  $I$  or  $U$  over the entire frequency range (up to approx. 3.8 kHz).
- **Fundamental frequency:** Only the RMS value of the fundamental frequency (50 or 60 Hz).
- **Harmonics:** The filtered RMS value on the selected range of harmonics with

$H0 = DC$ ;  $H1 =$  fundamental frequency;  $H2 = 2 \times$  fundamental frequency; ...  $H32 = 32 \times$  fundamental frequency

- i** *In the "Harmonics" measured value display (menu 2) all spectral lines are always displayed. This is independent of the trip signal setting.*

- i** *On the standard display, the **trip signal** is indicated as **resistance** (in  $\Omega$  or %) or as **current** (in A or %). The setting is entered in "Display" (menu 5).*

## 5. Initial measurement

During device start, all measured values are recorded.

### Factory settings

Menu		Factory settings
<b>Menu 6.1: HRG/LRG system</b>		
1. $U_{sys}$ (L-L)		400 V
2. CD-NGRM		CD1000
3. Frequency		50 Hz
4. $I_{NGR\ nom}$		5 A
5. $R_{NGR\ nom}$		150 $\Omega$
<b>Menu 6.2: CT</b>		
1. CT primary		600
2. CT secondary		1
3. CT connection		50 mA
<b>Menu 6.3: NGR</b>		
1. Method		auto
2. Filter		off
<b>Menu 6.4: Response values</b>		
	<b>HRG</b>	<b>LRG</b>
	1. $U_{NGR\ Trip}$	60 %
	2. $I_{NGR\ trip}$	60 %
	3. $> R_{NGR}$	150 % (HRG), 250 $\Omega$ (LRG)
4. $< R_{NGR}$ (HRG only)	–	50 % (HRG)
5. $t_{NGR\ trip}$	4. $t_{NGR\ trip}$	0 s
6. Ground-fault trip	5. Ground-fault trip	on
7. $t_{GF\ trip}$	6. $t_{GF\ trip}$	5 s
8. Alarm stored	7. Alarm stored	on
9. $t_{restart}$	8. $t_{restart}$	5 s
10. Max. no. of restarts	9. Max. no. restarts	2
11. Trip signal	10. Trip signal	RMS
12. Upper limit harmonic	11. Upper limit harmonic	32
13. Lower limit harmonic	12. Lower limit harmonic	0

Menu	Factory settings
<b>Menu 6.5: System settings</b>	
1. Ground-fault relay	Mode: Fail-safe
	Rel. Test: on
2. NGR-fault relay	Mode: Fail-safe
	Rel. Test: on
3. Trip relay	Mode: Fail-safe
	Rel. Test: on
4. Analog	Mode: 4-20 mA
	Function: $I_{NGR}$ (HRG) $I_{NGR}$ (LRG)
5. Dig. in/out	Device OUT: Fail-safe
	Pulser OUT: Non-fail-safe
	Digital 1: Pulser, Active high
	RESET IN: Active high
6. Buzzer	TEST IN: Active high
	Buzzer alarm: off
	Buzzer test: on

## Technical data

Rated voltage.....	250 V
Overvoltage category.....	III
Nominal supply voltage $U_s$ ..... AC/DC, 48... 240 V for UL applications..... AC/DC, 48... 240 V for AS/NZS 2081 applications..... AC/DC, 48... 230 V	
Tolerance $U_s$ .....	$\pm 15\%$
Tolerance $U_s$ (for UL applications).....	$-50\% \dots +15\%$
Tolerance $U_s$ (for AS/NZS 2081 applications).....	$-25\% \dots +20\%$
Frequency range $U_s$ .....	DC, 40... 70 Hz
Power consumption (max.).....	$\leq 7\text{ W} / 16\text{ VA}$
Switching elements (ground-fault, NGR-fault, trip relays) ..... Changeover contacts, configurable fail-safe/non-fail-safe)	
Contact data acc. to IEC 60947-5-1	
Rated operational voltage.....	AC 250 V/250 V
Utilization category.....	AC-13/AC-14
Rated operational current AC.....	5 A/3 A
Rated operational current AC (for UL applications).....	3 A/3 A
Rated operational voltage DC.....	220/110/24 V
Utilization category.....	DC12
Rated operational current DC.....	0.1/0.2/1 A
Minimum current.....	1 mA at AC/DC > 10 V
